As student president of Education and Representation, I would like my Campaign to focus on a few key main points. These points I believe are what the students of this University would like to happen in my year of being a president if I succeed.

My main aim of being student president is to bring people together, to create an atmosphere that all can enjoy and want to be around.

1. **Anti Generative AI** – This is one of my key points, as we are an arts university, and I believe we should take a stand against this type of AI. There is this constant pressure towards people in the industry and students alike that AI will take their job, and I feel like our university should do more to be seen as that voice for creatives to say we're against this process. I plan to lobby the university and ensure that they accurately represent the students' views.

2. **Student Bar** – This I believe will be one way to bring people together and create a personal space for students throughout the day. Students have been asking about this space for years and with the help of students we can work towards getting this student bar.

3. **Disability awareness** – As someone who has a disability, I think it would be helpful to talk about our experiences every now and then and make sure all students feel welcome and safe at the university. I will therefore ensure that all university buildings, spaces, and events are accessible to all students.

4. **Student Diversity and Mental Health** – The current presidents have done a great job of providing a space for Liberation groups. I plan to continue the work they've been doing, as well as introducing new historical and cultural events to make sure everyone gets a chance to celebrate their heritage. I also aim to boost the university's involvement with these events.

5. **Cross Course collaboration** – There is a general consensus amongst students that an increase in cross course collaboration would have a positive effect on our work and improving the university experience. Through the use of job boards, shared spaces, and events, I plan to increase the frequency of collaboration between courses.
There is also a lack of interaction between postgraduate and undergraduate students, so I plan to bridge this gap as well.

6. **Design of Spaces** – This point will focus on the representation of the students at university. I feel that most spaces look bland and boring. I believe the spaces should look creative, with murals on the walls or paintings that have been drawn by students. This will improve the creative atmosphere for students and will show the identity of this university towards others.
